Cardiac CT Live DVD-ROM
25 Live Mentored Cardiac CT Cases

Cardiac CT Live is a collection of 25 cardiac CT angiographic studies acquired live at The Heart Center in Huntsville, Alabama. Each case reviews various techniques in acquisition of cardiac CT studies as well as data processing and reconstruction. Each case is then followed by a detailed interpretation by Dr. Michael Ridner of the Heart Center. Cases include examples of normal cardiac anatomy, native coronary lesions, coronary artery bypass graft anatomy, coronary stents and assessment of LV function. The equipment seen on the DVD-ROM is manufactured by TeraRecon, Inc and SIEMENS Healthcare.

Case credit: Participants will be able to have these 25 cases count towards the "Minimum Number of Mentored Examinations Interpreted" according to the ACCF/AHA Clinical Competence Statement on Cardiac CT and MR (Budoff et al, JACC 46:2005;383-402), 50 cases for Level 2 training, and 100 cases for Level 3 training. Since patients are actually scanned, the cases will count towards the "Minimum Number of Mentored Examinations Performed" in which, according to ACC/AHA criteria, the physical presence of the trainee is required during the acquisition of the CT dataset. The candidate must be present in the scanning room during CT raw data acquisition and image reconstruction from that raw data in at least 25 of the 50 cases where the CT data acquisition is observed. **In up to 25 cases data acquisition can be witnessed from a taped video demonstration.** If the CT data sets from these taped patients are not available for workstation review, these cases will contribute to the 50 required cases for observation but not to the additional 100 cases requiring data manipulation and interpretation. Note: These cases count toward the initial experience required for Level 2 or 3 training, but not for continuing experience.
